

Project Proposal

Project Name Cloud Buck Convertor

By *George Li*

Date 5/12/2026

Summary

Create adjustable buck convertor to convert 9-24V to 3.3-5V with high capacity for current.

Project Objectives

1. Create project timeline.
2. Study how buck convertors step down voltage.
3. Create adjusting circuit to step down voltage.

Hardware Deliverables

1. Prototype step down circuit (breadboard/solderable).
2. Prototype protection circuit (breadboard/solderable).
3. Assembled PCB buck convertor.

Optional Deliverables

1. Adjustable output circuit.
2. Step up configuration circuit (3.3V to 5V).
