

Project Proposal

Project Name Statistical Logging Analytical Yield Electronic Receiver

By *George Li*

Date *5/12/2026*

Summary

Design a small commercial grade flight computer. The flight computer should be able to actuate different essential functions such as collecting and logging data, controlling motor actuation, etc.. The computer should be in PCB form and easily interfaced with.

Project Objectives

1. Create project timeline.
2. Use trade studies to determine barometer/altimeter, MCU, power supply, IMU, and firmware.
3. Create and test proof of concept board.
4. Write code to interface with flight computer.
5. Create logging method for data (SD, cloud, etc.).
6. Test flight computer.

Hardware Deliverables

1. Power regulation prototype (breadboard/solderable).
2. Prototype testing board.
3. Final flight computer board.

Software Deliverables

1. Data collection firmware.
2. Data logging and interpretation software.
3. Control firmware.
