Overview

Electrical engineer seeking an internship with a challenging company that will allow me to utilize my skills in embedded systems and avionics using Altium, MATLAB, and PCB design.

Education

California State Polytechnic University, Pomona CA

Est. Graduation: May 2028

Bachelor of Science in Electrical Engineering GPA: 3.66

Relevant Coursework

Signals & Systems, Intro to Microcontrollers, Electromagnetic Fields, Programming in C++, Electrical Circuit Analysis I, Electrical Circuit Analysis II, Microelectronic Circuits, Digital Logic Design, Electrical Circuit Analysis Lab I, Electrical Circuit Analysis Lab II, Linear Algebra, Calculus III

Group Projects & Experience

Rocket Propelled Lander Project (RPL)

Jan 2025 - Present

Avionics Team

- *Using 2 layer PCB design, technical documentation, created, assembled, integrated, and tested a DAQ system for successful data collection during static fire tests*
- *Using Altium to design, create schematics, make PCB layout, and order board to meet criteria for Collegiate Propulsive Lander Challenge data collection.*
- *Successfully met requirements for hot fire test with avionics system sampling, logging, and processing at high frequencies*
- *Soldered surface mount components and designed mounting system for all electronics*
- *Created safety control system using solenoids, relay modules, optocouplers, and transistors*
- *Utilized I2C communication protocol between microcontrollers and sensors for data logging*

Small Rocket Competition (SRC)

Sep 2024 - Nov 2024

Electronics/Avionics

- *Designed, implemented, and tested DAQ system for a rocket with H class motor utilizing Solidworks, Arduino, C++, and troubleshooting techniques*
-

Personal Projects

Cloud Buck Converter

May 2026 - May 2026

- *Designed 9-24V input to 5V output with 10 A capacity buck converter using circuit calculations and trade studies*
- *Created schematics and PCB layout using Altium with trace and via calculations*

SLAYER Flight Computer

April 2026 - May 2026

- *Created custom flight computer with BMP581 barometric pressure sensor and LSM6DSMT IMU*
 - *Performed trades studies on sensor and microcontroller components*
 - *Used Altium to make 2 sided 2 layer PCB layout to minimize footprint*
-

Skills

Software: Altium Designer, MATLAB, KiCAD, Word, Excel, PowerPoint, Simulink, SolidWorks, Fusion360, VScode, PSPICE, NI Multisim, Verilog

Tools: Oscilloscope, Function Generator, Multimeter, Digital Logic Probe, Power supply

Skills: PCB Design, PCBA, Circuit schematics, Electrical Troubleshooting, Technical writing, Trade studies, Soldering, Python, C++, Avionics Systems design, Filter design, MOSFET logic, BJT logic, I2C communication, SPI communication, Arduino, Verilog
